Verfassungsrechtliche Grundlagen der EU-Mitgliedschaft Österreichs
Theo Öllinger
1. Das EU-Beitritts-BVG
1.1. Einführung
Das verfassungsrechtliche Grundlag der Beitritts Österreichs zur EU bildet das Bundesverfassungsgesetz über den Beitritt Österreichs zur Europäischen Union (im Folgenden: Beitritts-BVG).
Dieses Verfassungsgesetz ist kurz, nicht unbedingt aber auch eindeutig. Art I ermöglicht die zurechtlegende Organe der Republik, den künftigen Beitrittsvertrag nach dem Stand des Verhandlungsvertrages vom 12. April 1994 abzuschließen – das allerdings unter der Voraussetzung, dass das Bundesvolk diesem Verfassungsgesetz zustimmt. Art II sieht ferner das Erfordernis einer Genehmigung des Beitrittsvertrages durch den Nationalrat und den Bundesrat, jeweils mit Zweidrittelmehrheit bei Anwesenheit von mindestens der Hälfte der Mitglieder, vor. Damit legt das Beitritts-BVG folgende speziellen Verfahrensregeln für den Abschluss des Beitrittsvertrages auf österreichischer Seite fest:
- Beschluss des Beitritts-BVG (d.h. der Ermächtigung zur Ratifizierung des Beitrittsvertrages) durch den Nationalrat mit qualifizierter Mehrheit gemäß Art 44 Abs 1 B-VG unter Zustimmung des Bundesrates mit gleicher qualitativer Mehrheit gemäß Art 44 Abs 2 B-VG;
- Volksabstimmung über den so beschlossenen Gesamtvertrag.

Abstract: Both Genetic and PSO are typical evolutionary algorithms with their own advantages. In this paper, a new evolution algorithm is introduced based on GA and PSO. The total population are divided into several tribes, which one hero individual and several common particles are included in each tribe. The movement velocity of each hero is calculated by global best point and local best point using this tribe just like PSO. Other common particles will search neighborhood of hero using neighborhood method of GA. Hero algorithm will converge fast and escape from local peak inheriting advantages of GA and PSO. These conclusions are proved from experiment of some function Benchmark functions.

A HERO EVOLUTIONARY ALGORITHM HYBRIDIZING FROM PSO AND GA

D.W. Gao, C.G. Zhou and M. Liu
College of Computer Science and Technology, Jilin University, Changchun 130012, P.R. China

Abstract: Both GA and PSO are typical evolution algorithms with their own advantages. In this paper, a new evolution algorithm is introduced based on GA and PSO. The total population are divided into several tribes, which one hero individual and several common particles are included in each tribe. The movement velocity of each hero is calculated by global best point and local best point using this tribe just like PSO. Other common particles will search neighborhood of hero using neighborhood method of GA. Hero algorithm will converge fast and escape from local peak inheriting advantages of GA and PSO. These conclusions are proved from experiment of some function Benchmark functions.

Keywords: Hero, genetic algorithm, particle swarm optimization

1. INTRODUCTION

The Particle Swarm Optimization (PSO) algorithm was originally introduced by Kennedy and Eberhart [1]. As a new Evolutionary Algorithm, the PSO was inspired by insect swarms. It has been proved to be an effective method to solve some optimization problem.

PSO is a typical global optimization algorithm compared with the traditional genetic algorithm (GA). The population of these two algorithm is initialised randomly. Both the evolution is carried on with the fitness of all individuals.
