

**AMERICAN SOCIETY OF NEPHROLOGY  
(ASN)**

# KAPSAM

---

- ◆ American Society of Nephrology(ASN) tarafından yayınlanan nefroloji alanındaki 2 adet dergiyi kapsamaktadır.
- ◆ Bunlardan ilki “Journal of the American Society of Nephrology”(JASN)’dir.Nefroloji dalındaki klinik ve temel alanlar ile ilgili makaleleri, eleştirileri kapsar. JASN 9.6 etki faktörü ile konusunda önemli bir yere sahiptir.Dergi nefrolojinin yanı sıra hücre biyolojisi, genetik, immunoloji, patoloji gibi konuları da içermektedir.
- ◆ İkinci yayın ise, Clinical Journal of the American Society of Nephrology(CJASN)’dir.Klinik nefroloji çalışmaları için önemli bir yayındır.Klinik nefroloji, böbrek patofizyolojisi, böbrek nakli gibi bir çok konuyu kapsamaktadır.

**Tolerance of the Human Kidney to Isolated Controlled Ischemia**  
**Abstract**  
Tolerance of the human kidney to ischemia is controversial. Here, we prospectively studied the renal response to clamp ischemia and reperfusion in humans, including changes in putative biomarkers of AKI. We performed renal biopsies before, during, and after surgically induced renal clamp ischemia in 40 patients undergoing partial nephrectomy. Ischemia duration was >30 minutes in 82.5% of patients. There was a mild, transient increase in serum creatinine, but serum cystatin C remained stable. Renal functional changes did not correlate with ischemia duration. Renal structural changes were much less severe than observed in animal models that used similar durations of ischemia. Other biomarkers were only mildly elevated and did not correlate with renal function or ischemia duration. In summary, these data suggest that human kidneys can safely tolerate 30-60 minutes of controlled clamp ischemia with only mild structural changes and no acute functional loss.
