

Web of Science®

WEB OF SCIENCE

- **Institute for Scientific Information (ISI) tarafından üretilen, dünyanın önde gelen fen bilimleri, sosyal bilimler ile sanat ve beşeri bilimler konularındaki süreli yayınlardan oluşturulan, çoklu disiplinde, yüksek kalitede araştırma bilgisini sağlayan, konu ve atıf veri tabanıdır.**
- **200 farklı kategoride bilimsel araştırma alanı sunmaktadır.**
- **Kapsamında Science Citation Index, Social Science Citation Index, Arts & Humanities Citation Index bulunmaktadır.**

KAPSAM

- **Science Citation Index Expanded : 6500'den fazla dergi,**
- **Social Science Citation Index : 1800'den fazla dergi,**
- **Arts&Humanities Citation Index : 1150'den fazla dergi olmak üzere,**
- **Web of Science veri tabanı, toplam 9400'ün üzerinde dergiyi indekslemektedir.**

KONULAR

Science Citation Index – Expanded : Astronomi, Bilgisayar, Botanik, Biyokimya, Biyoloji, Biyoteknoloji, Fizik, Zooloji, Eczacılık, Kimya, Malzeme Bilimi, Matematik, Tarım, Tıp (Nöroloji, Pediatri, Psikiyatri, Onkoloji, Pediatri, Hematoloji, Psikiyatri, Cerrahi), Veterinerlik.

Social Science Citation Index : Antropoloji, Dil Bilimleri, Bilgi Bilim ve Kütüphanecilik, Endüstriyel İlişkiler, Felsefe, Halk Sağlığı, Hukuk, Kadın Çalışmaları, Madde Bağımlılığı, Psikiyatri, Psikoloji, Siyaset Bilimi, Sosyal Çalışmalar ve Sorunlar, Sosyoloji, İletişim, Tarih.

Arts & Humanities Citation Index : Arkeoloji, Mimarlık, Sanat (Edebiyat, Müzik, Tiyatro), Dil Bilimleri, Felsefe, Din, Tarih.

Abstract: Background. The aim of this study was to assess hemodynamic consequences of increasingly common during endovascular stent-graft repair for thoracic aortic disease without surgical revascularization. We considered vertebral artery and posterior communicating arteries (PCoMAs) because their simultaneous insufficiency would dilate the existence and the diameters of these arteries were studied in a postmortem anatomic study with review of computed tomographic and magnetic resonance (MR) angiographies.

Methods: The anatomic material was collected as a part of forensic medicine autopsies. The anatomy of the cerebral angiography and permanent silicone casts.

Results: In five individuals (5.4%) the risk for acute neurological complication after "unprotected" closure of the LSA diameter of the right vertebral artery above the posterior inferior cerebellar artery was less than 2 mm and was associated with additional cases (3.3%) with only hypoplastic right vertebral artery, as "possible." Review of a clinical teaching file variations and abnormalities of the circle of Willis identified, also, other variants with increased risk.

Conclusions: When the LSA is closed, insufficient posterior cerebral circulation due to anatomic reasons occurs and debilitating complications in these cases, careful imaging of the right vertebral artery up to the basilar artery is mandatory. PCoMAs is necessary.

Journal Article

Frequency of different anti-depressants associated with suicides and drug deaths
International Journal of Legal Medicine
Gustav Drasch¹, Felicitas Dahlmann¹, Ludwig von Meyer¹, Gabriele Roeder¹ and Wolfgang Eisenmenger¹

Abstract From each case of suicide and drug-related death autopsied in the Institute of Forensic Medicine, Munich during the years 2001-2005, a toxicological investigation on anti-depressants (AD) was performed. In 180 suicides and 72 narcotic drug death cases, ADs were detected: 4 different classic tricyclic anti-depressants (TCAs), 6 other non-selective monoamine re-uptake inhibitors (NSMRIs), 5 selective serotonin re-uptake inhibitors (SSRIs) and 3 other ADs. The suicides were grouped further according to the types of suicide (violent or non-violent). The prescription frequency of the ADs in Germany, expressed as the defined daily dosages (DDDs), during the investigated years served for comparison. There were serious differences in the frequency of different ADs regarding to the manner of suicide. In cases associated with doxepin and trimipramine, non-violent suicides were distinctly over-represented, as in cases in which the drug itself was responsible for the death as in cases of non-violent suicides in other manners. In contrast, in cases with citalopram or opipramol, violent forms of suicides were significantly over-represented. For amitriptyline, the ratio was approximately balanced. For the remainder of the ADs, the case numbers were too low for a valid evaluation. The different frequency distributions of the ADs, associated with violent and non-violent suicides may be explained by their different pharmacological active profiles and the different lethality of overdoses of the different ADs. There was no indication at all for a special suicidal problem of suicides in juveniles. Amongst 1,127 suicides within 5 years, in an area with approximately 5 million people, the youngest suicide victim with SSRI was 28 years old. In drug death cases, citalopram was obviously over-represented.

CATENARY SOIL RELATIONSHIPS IN THE CUKUROVA REGION, SOUTHERN TURKEY

Full Text | Print | E-mail | Add to Marked List | Save to EndNote Web | more options

Author(s): DINC U, SENOL S, KAPUR S, SARI M
Source: CATENA Volume: 18 Issue: 2 Pages: 185-196 Published: 1991
Times Cited: 2 References: 12

Abstract: A catenary sequence from the north to the south of the Cukurova Region was studied using pedo-geomorphological criteria. The catena studied is typical for the Mediterranean coastal areas covering surfaces - geomorphic units - formed by neotectonic activity and the following processes related to pedology. Each geomorphic unit was determined to comprise soils at different stages of development. However a trend showing increase of age with increasing elevation was found from the south to the north of the region. Soils occurring on Fluvio-Marine Terraces are Mollisols and Alfisols; on the Bajadas are Vertisols, Entisols and Inceptisols; on the River Terraces are Entisols; on the Bottom Lands are Entisols, Vertisols, Inceptisols; on the Delta are Vertisols, and Inceptisols; on the Coastal sand Dunes are Entisols; and on the Uplands are Entisols and Mollisols.
